EDUCATION

Australian National University

2022 – 2026

- Bachelor of Advanced Computing (Hons.) – Software Development

PROFESSIONAL EXPERIENCE

Full Stack Software Developer

June 2025 – Present

GoSource Pty Ltd

Canberra, ACT

- Shipped full-stack features across 15+ production releases for Parks Australia web applications using Django, Python, React, TypeScript and Docker.
- Built 20+ end-to-end BDD test scenarios for the Secure Trusted Upload Facility using Gherkin, Pytest and MinIO, validating upload workflows, API behaviour and file storage before production release.
- Integrated 5+ RESTful API endpoints and authored unit tests for new product features, improving release quality through structured code reviews.
- Built an end-to-end Google Wallet integration in Python using JWT authentication and REST APIs, generating digital passes for 100,000+ annual visitors across Parks Australia national parks.
- Integrated the Geoscape Predictive Address API with rate limiting and structured field population, automating address resolution across 5+ fields to improve booking accuracy for Parks Australia users.

Software Engineer Intern – Applied AI Team

July 2024 – December 2024

PentenAmio

Canberra, ACT

- Built a retrieval-augmented generation (RAG) pipeline in Python/TypeScript for the Content Behaviour Generation platform, reducing LLM token usage by 35% while improving synthetic-user prompt relevance.
- Implemented probability-weighted content selection in Python, improving realism of AI-generated synthetic users and environment artefacts for cyber deception simulation.
- Designed and iterated LLM prompts for synthetic-user behaviour generation, improving consistency across generated emails, documents, chat messages and activity patterns in cyber deception scenarios.
- Optimised C# backend with hash-based lookups, cutting large-dataset processing time by 30%; reduced MongoDB query response times by 15% through targeted query tuning.
- Enhanced C# Windows agent workflows by adding configurable logon delays and structured logging, supporting automated synthetic-user activity in cyber deception environments.

APS Policy Officer – Vacationer

November 2022 – February 2023

Department of Infrastructure

Canberra, ACT

PROJECTS

ANU Hackathon 2025 – 1st Place | *React, Vite, Swift, Apple RoomPlan*

September 2025

- Engineered Apprentice (1st place), integrating Apple RoomPlan LiDAR scanning with a React/Vite web app to automate room measurement, material estimation and quote generation.
- Built a deep-link iOSweb workflow transferring LiDAR-captured dimensions in real time for automatic area, volume and quote calculations.

ANU Formula Sports Society | *Angular, Three.js, Blender, Python*

May 2024 – Jan 2025

- Deployed an Angular CAD visualisation tool serving 500+ monthly file accesses; built a Blender-to-OBJ pipeline with Three.js 3D rendering, cutting design review cycles by 4 hours/week for 20+ engineers.

Accenture Tech Bootcamp – 1st Place | *React, AWS Lambda, OpenAI, Google Search API*

June 2024

- Built Panorama (1st place), an AI news-analysis platform on AWS Amplify using OpenAI and Google Search APIs, achieving sub-500ms API response times through serverless Lambda architecture.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, C#, HTML/CSS, Haskell

Frameworks/Libraries: React, Angular, Three.js, Django, Pytest, Pydantic, Gherkin, Playwright, .NET, Moq JWT

Cloud/Dev Tools: Docker, AWS, CI/CD, Git/GitHub, MinIO, MongoDB, PostgreSQL

Tools: Xcode, IntelliJ, VS Code, Figma, Android Studio
