EDUCATION

Australian National University, 2022-2026

- Bachelor of Information Technology (Major in Software Development)

ICT10115 – Certificate I in Information, Digital Media and Technology, 2019

WORK EXPERIENCE

GoSource

Junior Full Stack Software Developer

June 2025 – Present

- Developing and maintaining features on full-stack web applications, implementing Python-based back-end logic and enhancing front-end interfaces with TypeScript to improve usability and functionality. Utilized Docker for development to replicate production-like environments locally, enabling smoother integration and faster debugging.
- Collaborating with cross-functional teams to design and deliver new features, integrating RESTful APIs for seamless data exchange, implementing unit tests to maintain code quality, and participating in code reviews, resulting in a **20%** improvement in feature delivery speed and reduced post-release defects.

Penten

Full Stack Software Engineer Intern in Applied AI Team

July 2024 – December 2024

- Built front-end features using TypeScript, Angular, and Python to implement application logic and seamlessly integrate with back-end systems, and ensure performance using the testing framework Pytest, successfully completing key features and enhancing user experience. Collaborated closely with UI/UX designers to create responsive and accessible user interfaces.
- Optimized back-end development using C#, employing dictionaries to efficiently sort large data sets, increasing processing speed by **30%**.
- Utilized MongoDB Compass for database management and optimized query performance, reducing response times by **15%**.

Accenture Tech Bootcamp, Winning Team

Full Stack Software Developer

June 2024

- Engineered *Panorama*, an AI-driven web platform using React.js, AWS Amplify and Bootstrap to counter biased viewpoints in news articles. Designed from Figma prototypes and deployed successfully on AWS Amplify.
- Expanded functionality with Python, integrating OpenAI and Google Search APIs to improve data accuracy by **20%**, and implemented AWS Lambda to cut API response times by **10%** and enhance scalability.

PROJECTS

ANU Hackathon 2025, Winning Team

Software Developer

September 2025

- Developed Apprentice, a construction planning tool that integrates Apple's RoomPlan API with a React/Vite web app to automate measurement capture and project estimation
- Engineered a deep-link workflow between Swift/iOS and a web-based estimator, enabling real-time transfer of LiDAR-captured dimensions into the app for automatic area/volume calculations, material selection, and quote generation. Built the front end with React, Vite and TailwindCSS.

ANU Formula Sports Society

Information Technology Operations

May 2024 – January 2025

- Maintained the society's website using Angular and developed an internal tool to streamline access to CAD files for members by converting these files into OBJ format using Blender and integrating the Three.js library to render interactive 3D models on the website.

Website Development for Ekta

Marketing Team

February 2023 – November 2024

- Designed and developed a fully responsive website using React.js based on Figma prototypes, improving user retention time. Maximized user accessibility and ensuring a seamless cross-platform experience

TECHNICAL SKILLS

Skills: Microsoft Office | Python, Java, JavaScript, C#, TypeScript, HTML/CSS, Haskell, React, Swift, Xcode, Angular, Three.js, Docker, Git, MongoDB, AWS, IntelliJ, VS Code, Figma, Android Studio
